

Lab Exercise #2  
*Debugging with Eclipse*  
*Computer Science 2334*

Name: \_\_\_\_\_

*Learning Objectives (Milestones):*

1. Install Eclipse and import an existing project to it.
2. Learn to use Eclipse debugger.

*Instructions:*

This lab exercise *requires a laptop with an Internet connection*. Once you have completed the exercises in this document, you will submit it for grading. You should legibly write your name at the top of this lab handout.

1. Download the `Lab2.zip` file from the class website. Import them into Eclipse as a project.
2. Run the project by using Eclipse. List the error found and give a short explanation of it
3. Fix the error by changing **ONLY** the `work()` method in `Lab2.java`. Write down the modified `work()` method.
4. Using Eclipse debugger, what is the value of `myArray[4]` after `work()` is done?
